Microsoft Project Server
Mentored Learning Workshop Use Case

Organization: Government Agency
Technologies: MS Project Server Digital Dashboards

Project Background

- A large organization utilized MS project and MS Project Server to track IT projects. The scope was limited to a number of large IT projects.
- Other business units used various other tools to track projects such as SharePoint team sites, Excel, etc.
- A centralized enterprise-wide project management tool was being underutilized. Additionally, various units followed their own project management standards and processes.
- The executives desired a centralized project management solution that would create accountability, transparency, and the ability for timely progress updates. They also wanted digital dashboards for the executive level.

Planning

- Various tools were considered. The most viable and timely solution was to build on an existing MS Project and MS Project Server solution which could best solve management's requirements.
- Project management and IT staff had to gain more experience about MS Project and MS Project Server's advanced capabilities and digital dashboard features.

Solution & Result

- Management selected phil-costanzo.com Mentored Learning Solutions to provide the necessary learning to achieve the executive's requirements. .
- With expert mentoring, management, IT staff and business analysts effectively used MS Project and Project Server to monitor many enterprise-wide projects.
- Management was able to monitor projects, make project corrections when necessary, and ensure project success.
